

Droplet Reminder Cup

What is its purpose:

The Droplet Reminder monitors the frequency of drinking. If the person forgets to drink, a reminder alarm (lights or sound) alerts them which encourages hydration.

Why might it be helpful:

The smart base fits onto either the mug or the tumbler and monitors that the person is drinking regularly. This can help prevent dehydration or urinary infections.

Who would benefit from it:

Droplet Reminder help those who need additional support of encouragement to stay hydrated.

What do I need to be able to use it:

Set up is straightforward following instruction. The person may need help and prompting to get into the routine of using it.

Where can I get one?

Through NRS online or other online shops which supply this product.

How much does it cost?

£40 - £45
