

Rotating Cushion

What is its purpose:

The swivel cushion allows for a smooth swivel transfer without jarring or twisting. The top layer of the cushion swivels on the base to help the person rotate.

Why might it be helpful:

Useful for getting into and out of car seats. Easily transferable to different vehicles or chairs.

Who would benefit from it:

Ideal if you have flexibility and mobility limitations. It can also support a person who has difficulty processing instructions to manoeuvre out of the car and reduces the physical support that a care may need to provide.

What do I need to be able to use it:

You should be able to simply place the cushion on your desired seat. This will not be appropriate on a chair with arms.

Where can I get one?

Either online or you can visit a local mobility shop.

How much does it cost?

£20 - £40
